

Hello,

Voice services in the UK are undergoing fundamental changes. The switch-off of traditional voice services is planned for 2025, and BT will stop selling ISDN services this year, which are relied upon by many businesses to make and receive calls. The move to IP voice services is a case of when and not if.

Vodafone Evolved Voice over Public Internet makes it easy to modernise business calling and make the move to IP voice. It turns physical phone lines into virtual lines using your internet connection – **with a business-grade SIP solution that enables lower cost calling without compromise.**

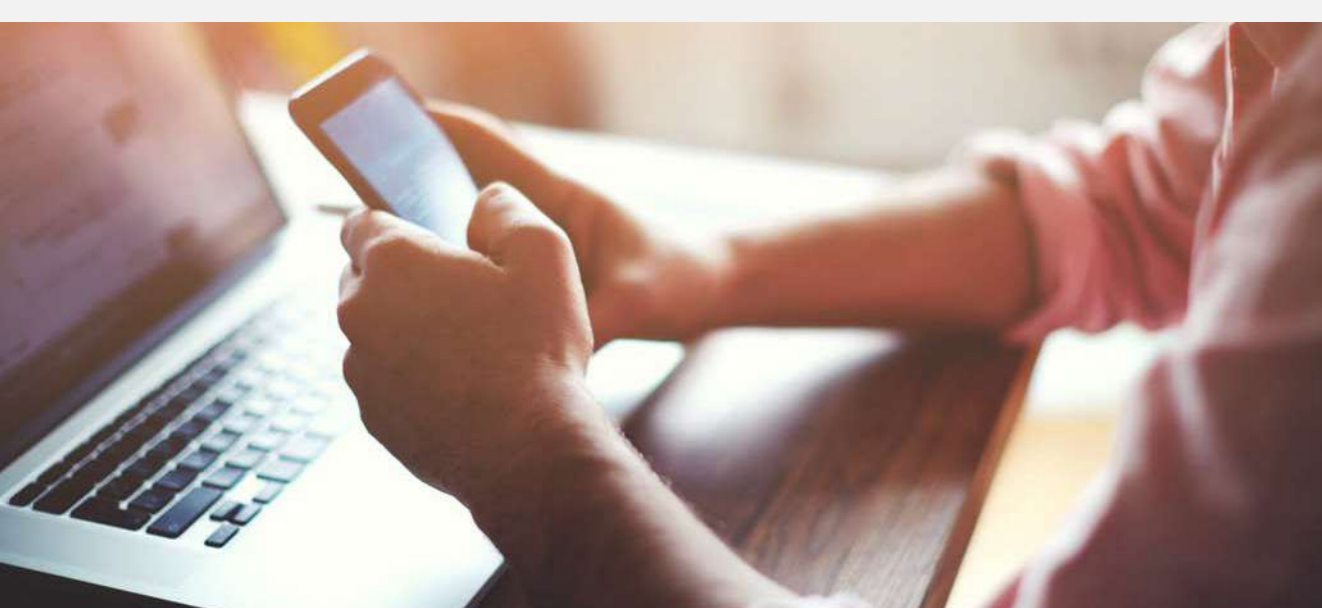

Click to watch the video below to get a glimpse of Vodafone SIP's transformative power
